

An Information Evening Organised By The Rotary Club of Twickenham

What Can We Do To Beat Prostate Cancer?

Prostate cancer is the most frequently diagnosed cancer in men and more than 10,000 die in the UK every year as a direct result of the disease.

A man aged 50 has a 1 in 11 chance of being diagnosed with prostate cancer during his lifetime. Last year more than 30,000 men in the UK were told they have prostate cancer.

However there have been advances in both prevention and treatment.

This is an important information evening for men (and the women who care about them) to hear the facts and latest research news from an eminent research scientist .

Wednesday 14th April 2010

At 7.30pm for 8.00pm

Venue: The Fellowship Hall,
Duke Street Church, Richmond.
(entrance via Quadrant Road)

Free Admission: discretionary leaving collection (Proceeds to the Association for International Cancer Research)

About The Speaker:

Dr Mark Matfield

Dr Matfield has a PhD in medical research from the University of Leicester and has carried out cancer research at the University of Edinburgh and Stanford University in California. For the last 20 years he has served as the Scientific Co-ordinator to the Association for International Cancer Research. He has a particular interest in prostate cancer research which is matched by the Association's dedicated fund to support research into this field.
